

IKAROS-Androids Tutorials

Making Clothing/Armour for IKAROS-Androids - [IKAROS-Androids: How To](#)

Basically you need a nif model you want to have for IKAROS-Androids. Convert it with OS and name the output model like Pants_IKAROS.nif. In the Creation Kit you need to load up both IKAROS-Androids and the original .esp of the clothing you were converting. Make a new armor addon/armor set for this converted outfit. Add IKAROS androids to the RACE dropdown for both/ add ma_IKAROS_Material [KYWD:0100DD28] and ma_IKAROS_Glow_Color [KYWD:01033616] to the main keyword list. Also add ap_armor_IKAROS_Skin "IKAROS Body Skin" [KYWD:0100DD27] and ap_armor_IKAROS_Glow_Color "IKAROS Glow Color" [KYWD:01033617] to Attach Parent Slots.
